

GELEPHU SHAMBHALA AI LABS

COMPANY BROCHURE / 2026

Practical technology. Built with purpose.

A Gelephu Mindfulness City based technology enterprise building useful software today and developing toward a connected technology ecosystem, phase by phase.

GELEPHU MINDFULNESS CITY / BHUTAN

WHO WE ARE

Rooted here. Built to go further.

Gelephu Shambhala AI Labs is an emerging technology enterprise based in Gelephu Mindfulness City and registered as a sole proprietorship.

We begin with practical software and digital systems that solve defined operational problems and can be supported over time.

OUR DIRECTION

Build. Validate. Connect. Scale.

Our long-term plan is the Shambhala Ecosystem: independent industry products connected through shared infrastructure, with intelligence and automation added only when the foundations are ready.

CURRENT FOCUS

Industry software, beginning with GarageOS, and clearly scoped digital projects.

Useful products now. Broader capabilities over time.

01

CURRENT

Shambhala Software

Industry operating systems, beginning with GarageOS.

02

CURRENT

Shambhala Digital

Websites, applications, and tailored digital systems.

03

PLANNED

Shambhala AI

Useful AI features built on reliable data and safeguards.

04

FUTURE

Shambhala Automation

Connected devices, smart environments, and system integration.

05

LONG TERM

Shambhala R&D

Computer vision, robotics, AgriTech, and other emerging fields.

The planned areas describe future direction. No dedicated R&D programme is active today.

FIRST COMMERCIAL PRODUCT

GarageOS

A workshop management system designed to make everyday operations clearer, more reliable, and easier to manage.

- Job cards and estimates
- Invoices and payments
- Inventory and purchasing
- Customers and suppliers
- Expenses and reporting
- Role-based workshop access

PRODUCT PRINCIPLE

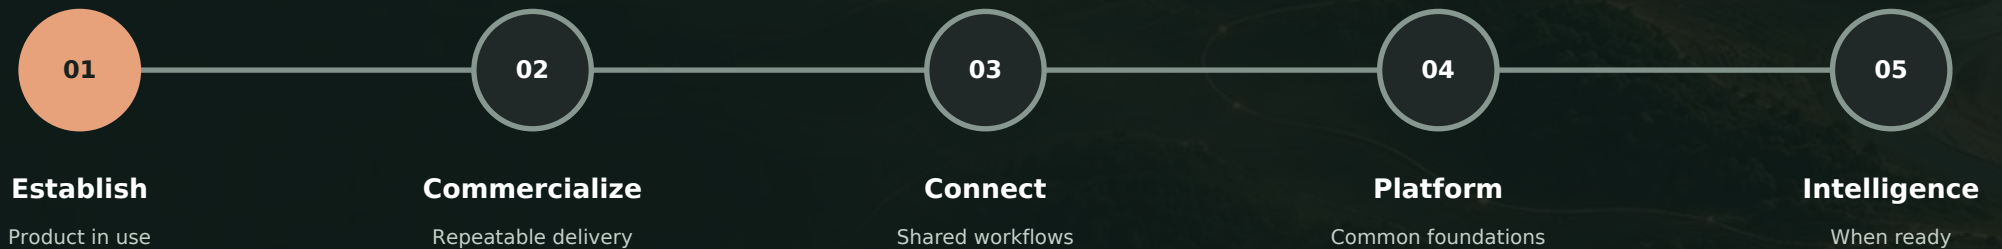

Software should solve real operational needs.

GarageOS is being developed around workshop workflows, customer feedback, dependable records, and ongoing product improvement. It is the first step in a broader product strategy - not a claim that the full ecosystem already exists.

WORKSHOP MANAGEMENT / BUILT IN BHUTAN

From first product to connected ecosystem.

OUR RULE Build -> Validate -> Commercialize -> Integrate -> Scale

Each stage should deliver a useful product or capability before it becomes the foundation for the next.

GELEPHU MINDFULNESS CITY

Tenzin Yuedkhil

Founder & Proprietor

LEADERSHIP

Rooted in Gelephu. Building for the future.

Tenzin Yuedkhil is a homegrown entrepreneur building Gelephu Shambhala AI Labs around practical technology, disciplined execution, and a long-term commitment to local capability.

His direction is clear: start with useful commercial products, learn from real customers, and expand responsibly as evidence, skills, partnerships, and resources develop.
